

Activity logs

- Activity Logs provide visibility into all actions taken in an Azure subscription, resource group, or resource
- Azure Monitor stores Activity Logs data and helps build alerts, dashboards, and reports for insights into Azure security and functionality
- Activity Logs can be used for tracking resource changes, diagnosing problems, auditing compliance, and trend analysis
- Entries in Activity Logs are kept in Azure for 90 days with no fee before being erased, but can be routed to another location for longer retention
- Activity Logs are available for AKS cluster or for resources in the infrastructure resource group
