

Diagnose and solve problems and Ask Genie

- "Diagnose and Solve Problems" is a feature at the Azure level that can be used in AKS for troubleshooting issues
- It offers a centralized dashboard for viewing cluster health and performance, along with detailed insights at cluster level, nodes, and containers
- The feature provides actionable recommendations and best practices for fixing issues based on telemetry data
- It helps to identify and resolve issues such as misconfigured resources or bottlenecks in the AKS cluster
- The configuration is automatic and requires no user input or additional billing cost
- "Ask Genie" is a conversational interface available under "Diagnose and Solve Problems" in Azure
 - It uses AI and machine learning to provide personalized responses, offering recommendations and resources to help users solve problems or gain a better understanding of Azure
