

Azure Status and Resource health

- **Azure Status**
 - **Azure Status** is a **website that provides real-time information about service outages**, planned maintenance, and events that may impact the availability of Azure services
 - **Users can view the current status** of Azure services and receive notifications about service interruptions via email, SMS, or RSS feed
 - **Contains root cause analysis (RCAs)**
- **Resource health**
 - **Resource Health provides personalized information** on the present and previous **health status** of Azure resources, proactively alerting users to problems that might impair the operation, performance, or availability of their resources
 - It also provides events if specific, unrecommended actions were taken
