

Understanding alerts

- Alerts allow you to monitor changes or problems and take action when certain conditions are met
- Types of alerts: metrics, log, activity log, smart detection, Prometheus
- Azure provides out-of-the-box alert rules, but you can also create custom ones
- An Alert Rule includes:
 - Resources
 - Signal/telemetry
 - Conditions
- After an alert is triggered, it includes:
 - Alert processing rules
 - Action groups
 - Alert conditions
 - User response
