

Auto-upgrade feature

- **Ensures** that your clusters are **up to date** and don't miss the newest AKS features or patches
- Control plane and node pool(s) are upgraded at once
- Settings at auto-upgrade feature takes ~24 hours to take effect
- The format of a Kubernetes version is **[major].[minor].[patch]**
 - 1.25.5:
 - 1 – major; 25 – minor; 5 – patch
- Available channels
 - **none**: it doesn't perform any automatic upgrade
 - **patch**: once a new supported patch version is made available, automatically updates the cluster to that one while maintaining the minor version
 - **stable**: automatically upgrades the cluster to minor version N-1's most recent supported patch release, where N is the most recent minor version that is still in support
 - **rapid**: which automatically upgrades the cluster to the newest supported minor version or patch release
 - **node-image**: automatically updates the node image to the most recent version
